DRG Diagnostics

DRG Instruments GmbH, founded in 1973 by Dr. Geacintov, a subsidiary of DRG Intl. Inc., USA, is a diagnostics manufacturer and distributor with successful operations in over 100 countries. The DRG Group focuses on high technology medical diagnostic areas such as Diabetes Diagnosis, Gynecology, Oncology, Immunology, Infectious Diseases and Toxicology. The highly skilled DRG Staff of medical, clinical, marketing and service specialists are experts at taking innovative technology to market through local territory knowledge and contacts, end-user training, education and cost effective financial and logistical support. The DRG-Development and Immunoassay production facilities are located in Marburg, Germany, in addition to OEM manufacturing in the USA.

A range of new, occasionally unique ELISA kits has been developed. The DRG ELISA kits compete effectively in both price and performance in all major world diagnostics markets.

To complete the diagnostic reagent line, DRG supplies the clinical laboratory with all necessary equipment, including a semi-automatic microtiterplate processor, the DRG E-LizaMat 3000, and fully automated Open Systems for 2 or 4 microtiterplates, which are fully compatible with all ElisAs.

DRG has developed the FIRST fully automated random access Analyzer for Immunoassays, Clinical Chemistry and Immunoturbidimetry

DRG:HYBRID•XL®

The system was launched November 2013.

The DRG Group operates through a network of DRG subsidiaries in Germany, Poland, Russia, China and the Czech Republic, and through distributors in Europe, the Middle East, Africa and the Pacific Region. This infrastructure offers access to specialized medical markets in most major countries around the world.

ELISAS that perform

DRG

DRG develops and manufactures diagnostic ELISA test kits for use in clinical and research laboratories. The experience of our production and management team guarantees to provide high quality products, competitive prices and excellent customer service.

DRG-DIMA ELISAS

In October 2010 DRG announced the acquisition of the microtiter plate ELISA production of DIMA Corporation, a subsidiary of bioMérieux, in Lyon, France. This acquisition included the ELISAs free and total PSA, SHBG as well as TSH, total T3 und T4, which have been part of the DRG portfolio since a long time already.

Production Facility, Marburg

DRG-NOVUM ELISAS

At the end of 2003 DRG acquired the assets of Novum Diagnostica, Dietzenbach. Novum developed and manufactured a wide range of products to identify and manage infectious diseases.

Now DRG manufactures these ELISAS with the same excellent quality and offers these assays at competitive prices.

New ELISA Hepcidin 25 (bioactive) high sensitive

The gold standard in Hepcidin measurement

- Easy and straight forward assay procedure (no extraction or centrifugation)
- Total assay time < 2 hours
- All reagents ready to use
- Two controls included in the kit
- High sensitivity
- Good correlation to SELDI-TOF-MS

Quality

DRG Instruments GmbH has established and applies a quality management system for the following scope: **Design and Development, Manufacture and Distribution of in vitro Diagnostics by Enzymeimmunoassays (ELISAS) and Radioimmunoassays (RIAS) Technology.**

Proof has been furnished that the requirements specified in EN ISO 13485:2012/AC:2012 EN ISO 9001:2008 ISO 13485:2003 CMDCAS are fulfilled.

We participate in a number of quality assessment schemes, which include Instand (Germany) and RfB, Referenzinstitut für Bioanalytik, Bonn.

DRG products meet the essential requirements of the directive 98/79/EC of 27. October 1998 on in-vitro diagnostic medical devices.

Iron Metabolism

Hepcidin 25 (bioactive) high sensitive EIA-5782

New

ELISAS for the quantitative measurement of Hepcidin 25 in human serum or plasma.

Hepcidin is a small cystein-rich peptide produced in the liver. This molecule regulates the absorption of iron in the body similarly to the correlation of insulin and sugar. Hepcidin was initially isolated as a 25 amino acid (aa) peptide

- Sensitivity: 0.135 ng/mL
- Incubation: 60/30/20 min
- Standard Volume: 20 µL serum/plasma
- Standard Range: 1 - 81 ng/mL
- Assay Type: competitive
- Excellent correlation to SELDI results

in human plasma and urine exhibiting antimicrobial activity. Human Hepcidin is produced from a 84 aa precursor including a putative (24 aa) signal peptide.

Application of the present ELISA allows the detection and determination of Hepcidin 25 in serum or plasma.

DRG:HYBRID•XL®

Fully automated Random Access Analyzer for Immunoassays and Clinical Chemistry

DRG introduces the totally newly designed **DRG:HYBRID•XL** Analyzer: This innovative and unique technology allows, for the first time, the simultaneous measurement of immunoassays and clinical chemistry parameters including turbidimetric tests in one sample.

Specifications

Test Principle:

Enzym Immunoassays
Clinical Chemistry
Immunoturbidimetry

Samples/Cartridges:

Up to 40 samples/run
Random access possible
STAT possible
Reagents on board (cartridge)
Barcoded reading of samples and reagents

Calibration:

Barcoded Master Curve
2 point recalibration

Efficiency:

Up to 40 tests/hour
Benchtop Analyzer
(60.8 x 63.5 x 58.6 cm high)
Clot detection
Liquid level detection
Long stability (1 year) of the reagents

Handling/Interface:

Touchscreen Monitor (8.5 inch.)
Bi-directional Interface (ASTM)

Targeted assay menu:

Finally the targeted assay menu will comprise more than 100 tests, including some unique parameters like 17-OH Progesterone, CA 72-4, Free Testosterone, Renin, Aldosterone, 25 OH-Vitamin D, D-Dimer, Homocystein, HbA1c, Digitoxin and many others.
